

FLEXILUX II Laparoscopes

Ø 10 mm

The laparoscopes we have on offer are of high quality in optics and offer a superb contrast as well as an outstanding color reproduction. Equipped with high performance lenses they feature a full HD image quality.

As the illumination fibers are fastened strain free, they experience no tensile stress during the autoclaving process. Together with the welded outer tube, the system is sealed tight which results in a long life cycle for the optical components.

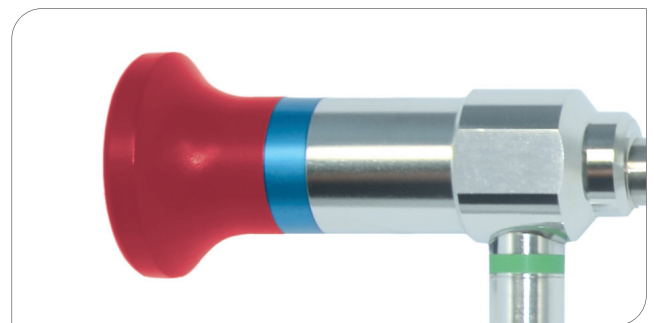

For laparoscopic applications in visceral surgery, urology and gynecology, the laparoscopes feature:

- Homogenous and sharp-edged illumination
- Optimized optical system for very bright images with rich contrast
- Strain free fastened illumination fibers
- Gold soldering of the plan glass which increases tightness and durability
- Low cost of ownership due to long life cycle
