

Nephroscope and Mini-Nephroscopes

Nephroscopy is a percutaneous intervention; the main indication is the removal of kidney stones. Especially stones that are stuck in the renal pelvis or which are too big to be removed via the natural orifice ureter and urethra can be treated.

- Outstanding performance (contrast enhanced image bundle, best view, direction of view ideally aligned)
- Safe and reliable (robust, tightly sealed, laser welded, easy to use and to clean)
- High irrigation flow allows high stone-free rate
- Low cost of ownership – long lifetime
- Lightweight construction
- Best possible cleaning results and inspection possibilities by detachable instrument bridge
