

FLEXILUX II Arthroscopes

2.7 mm and 4.0 mm

The arthroscopes we have on offer are of high quality in optics and offer a superb contrast as well as an outstanding color reproduction. The optical system of the 2.7 mm and 4.0 mm scopes is calculated and aligned with regard to the best possible resolution. This ensures that it can record the HD resolution of the endoscopy camera.

The arthroscopes in 2.7 mm and 4.0 mm are mainly used for procedures on the knee, shoulder, jaw, wrist, ankle and elbow. At SCHÖLLY they feature:

- Optimized optical system for very bright images with rich contrast
- Low cost of ownership due to long life cycle
- Compatibility

In order to use sheath systems of other manufactures, SCHÖLLY offers arthroscopes which are mechanically compatible. The outer dimensions and the optical parameters are matched to the use with the sheaths of the respective system/manufacturer.
